1. Application

The display is a TFT active matrix electrophoretic display, with associated interface and control logic, and a reference system design.

The 5" active area contains 800x600 pixels, and has full 1~4 bit display capabilities

An integrated circuit containing interface, timing and control logic is supplied with each panel.

2. Features

- ➢ High contrast TFT electrophoretic
- ➢ 800x600 display
- ➢ High reflectance
- ➢ Ultra wide viewing angle
- ➢ Ultra low power consumption
- \succ Pure reflective mode
- ➢ Bi-stable
- Commercial temperature range
- ➤ Landscape, portrait mode
- Antiglare hard-coated front-surface \geq

6.Electrical Characteristics

6-1) Panel interface description

This panel is driven by ASIC PVI-6001A or "Apollo" display controller ASIC. See control product specification for details. **6-2) Panel DC characteristics**

- The maximum power and maximum currents are specified for the worse case power consumption. This occurs when 2 horizontal inverted stripped images are displayed

- The typical power is the consumed power when "typical images" are displayed.
- The standby power is the consumed power when the panel controller is in standby mode.
- The listed electrical/optical characteristics are only guaranteed under the controller & waveform provided by PVI

8. Optical characteristics

8-1)Specifications

Measurements are made with that the illumination is under an angle of 30 degrees, the detection is perpendicular unless otherwise specified.

8-2)Definition of contrast ratio

The contrast ratio (CR) is the ratio between the reflectance in a full white area (Rl) and the reflectance in a dark area (Rd):

CR = Rl/Rd

Note 8-1

Luminance meter: Eye-One Pro Spectrophotometer

Only reflectivity effect is counted when using above optical measurement with Eye-One Pro Spectrophotometer .Some scattering effect will be counted in actual visual conditions and the measurement data will be higher. A second optical measurement method and related data by which scattering effect counted are listed for reference.

Method	SYMBOL	PARAMETER	CONDITIONS	MIN.	Luminance meter	UNIT
Reflectivity only	R	Reflectance	White	30	Eye-One Pro Spectrophotometer	0/
Reflectivity & scattering	R	Reflectance	White	35	EOTS	70

8-3)Reflection Ratio

The reflection ratio is expressed as:

$R = Reflectance \ Factor_{white \ board} \quad x \quad (\ L_{center} \ / \ L_{white \ board} \)$

 L_{center} is the luminance measured at center in a white area (R=G=B=1). $L_{white board}$ is the luminance of a standard white board. Both are measured with equivalent illumination source (see figure 8.3). The viewing angle shall be no more than 2 degrees.

9.HANDLING, SAFETY AND ENVIROMENTAL REQUIREMENTS

WARNING

The display glass may break when it is dropped or bumped on a hard surface. Handle with care. Should the display break, do not touch the electrophoretic material. In case of contact with electrophoretic material, wash with water and soap.

CAUTION

The display module should not be exposed to harmful gases, such as acid and alkali gases, which corrode electronic components.

Disassembling the display module can cause permanent damage and invalidate the warranty agreements.

Observe general precautions that are common to handling delicate electronic components. The glass can break and front surfaces can easily be damaged. Moreover the display is sensitive to static electricity and other rough environmental conditions.
